LinkedIn: hitesh-k-r

Profile

Aspiring Data Analyst with a strong foundation in Machine Learning, Artificial Intelligence, Data Analytics, and Business Intelligence. Passionate about leveraging data to solve complex business problems and continuously learning emerging technologies.

Education

SRH University Hamburg | 2025 – Present
Master of Science - Applied Data Science & Artificial Intelligence

Presidency University | 2020 – 2024
Bachelor of Technology - Computer Science & Engineering

Technical skills

Programming: Python, SQL, R
Data science: Pandas, NumPy, Scikit-Learn, Feature Engineering, Data Cleaning, Exploratory Data Analysis (EDA)
Machine learning: Classification, Regression, Time-Series Forecasting, Model Evaluation, Hyperparameter Tuning
Visualization: Power BI, Tableau, Matplotlib, Seaborn
Databases: MySQL, MongoDB
Tools: Git, GitHub, Jupyter Notebook, VS Code, Google Colab

Selected projects

Artemis — Local AI Desktop Assistant

Python / Ollama / WebView2 / Whisper / Kokoro / SQLite

Built a Windows desktop assistant combining local AI chat, speech recognition and spoken replies, document search, personal memory, and reminders. Python and WebView2 connect the interface to Ollama and explicit desktop tools, with local SQLite storage.

Aircraft Performance Analytics Pipeline

Python / Pandas / NumPy / ETL / Analytics

Developed an end-to-end analytics pipeline to process aircraft performance data. Built automated preprocessing workflows, generated KPIs, and analyzed operational performance to derive actionable insights.

Supply Chain Delivery Delay Prediction

Python / Machine Learning / Scikit-Learn

Built a predictive machine learning model to forecast delivery delays using logistics and supply chain data. Applied feature engineering, model evaluation, and performance optimization.

Crypto Price Direction Prediction

Python / Time-Series Analysis / Machine Learning

Developed a time-series machine learning model to predict cryptocurrency price direction using historical market data and feature engineering techniques.

Retail Sales Analytics Dashboard

SQL / Power BI / Business Intelligence

Designed an interactive dashboard to visualize sales KPIs, revenue trends, customer behavior, and business performance using SQL and Power BI.

Research

Augmented Reality and Holography: Redefining the Way of Human-Computer Interaction
