Profile

M.Sc. Data Science & Artificial Intelligence student with project experience in SQL, Python, Power BI and Tableau. Built data-cleaning workflows, KPI dashboards, relational data pipelines and exploratory analyses; seeking a Working Student or Internship role in Analytics or Business Intelligence.

Education

M.Sc. Data Science & Artificial Intelligence, SRH University **2025 – Expected 2027**

Bachelor of Computer Science, Presidency University **2020 - 2024**

Technical Skills

BI & reporting: Power BI, Tableau, Microsoft Excel, DAX, KPI reporting, dashboards, data visualization

Programming & Analytics: SQL, Python, R, pandas, NumPy, exploratory data analysis (EDA), trend analysis

Data preparation & stores: PostgreSQL, MySQL, MongoDB, ETL, data cleaning, data quality, relational modeling

Tools & platforms: Git, Streamlit, Matplotlib, Power BI, Tableau

Projects

Retail Sales Analytics Dashboard | *SQL, PostgreSQL, Power BI, DAX*

- Created a SQL-to-Power BI reporting workflow with KPIs for revenue, profit, order volume and profit margin.
- Built DAX measures and interactive views to analyze sales trends, customer segments and category performance.
- Explored time-based comparisons and forecasting to help interpret changing business results.

Retail Store Sales - Data Cleaning & Performance Analysis | *Tableau, Data Cleaning, EDA*

- Cleaned retail sales data by addressing missing values, duplicate records and inconsistent entries.
- Performed exploratory analysis of revenue, margins, product categories, regional performance and seasonal demand.
- Designed an interactive Tableau dashboard to communicate business KPIs and sales patterns.

Aircraft Performance Analytics Pipeline | *MySQL, ETL, Python, Streamlit*

- Merged aircraft and helicopter attributes and loaded 962 structured records into MySQL.
- Produced an interactive Streamlit dashboard for reviewing technical attributes and aircraft-performance indicators.

Supply Chain Delivery Delay Analysis | *Python, Predictive Analytics*

- Analyzed 180K+ shipment records to investigate fulfillment delays and operational performance.
- Created delivery-delay models (MAE: 0.55 days) and presented findings in an interactive dashboard.

Steam Live Games Dashboard | *Python, MongoDB, Streamlit*

- Built a prototype data-collection workflow for Steam game rankings with MongoDB storage and 15-minute refresh scheduling. And developed Streamlit KPI views to explore collected game activity and rankings.

Artemis - Offline Voice-Command Assistant | *IN PROGRESS | Python, sherpa-onnx*

- Exploring offline keyword spotting for a custom "Hey Artemis" wake phrase; assistant integration is ongoing.

Certifications

Databases and SQL for Data Science with Python (IBM-Coursera).
Python for Data Science, AI & Development(IBM-Coursera).
