Profile

M.Sc. Data Science & Artificial Intelligence student building end-to-end analytics and machine-learning projects with Python, SQL and scikit-learn. Experience across predictive modeling, time-series validation, data pipelines and interactive dashboards; seeking a Working Student or Internship role.

Education

M.Sc. Data Science & Artificial Intelligence, SRH University — **2025 – Expected 2027**

Bachelor of Computer Science, Presidency University — **2020 - 2024**

Technical Skills

Programming & libraries: Python, SQL, R, pandas, NumPy, scikit-learn

ML & evaluation: Regression, classification, Random Forest, logistic regression, feature engineering, cross-validation, MAE, classification accuracy

Data engineering & analytics: ETL, MySQL, MongoDB, data cleaning, EDA, time-series features, data visualization

Tools & platforms: Git, Streamlit, Matplotlib, Power BI, Tableau

Projects

Supply Chain Delivery Delay Prediction | *Python, scikit-learn, Predictive Analytics*

- Built predictive models using 180K+ shipment records; achieved 0.55-day mean absolute error (MAE) for delivery-delay estimation. And developed an interactive dashboard to communicate logistics performance and model-based insights.
- Analyzed delivery performance and delay patterns, including an average observed delay of approximately 0.57 days.

Crypto Price Direction Prediction | *Python, Time-Series Machine Learning*

- Engineered lag and rolling-window features and applied chronological train/test validation to reduce information leakage.
- Benchmarked five classification approaches for market-direction prediction, improving accuracy from 52.12% to 52.65%.
- Compared model results against a logistic-regression baseline and a tuned Random Forest approach.

Aircraft Performance Analytics Pipeline | *Python, MySQL, Random Forest, Streamlit*

- Combined aircraft and helicopter source data into a structured 962-record MySQL dataset through an ETL workflow.
- Built a Random Forest model to estimate aircraft range from technical performance attributes.

Artemis - Offline Voice-Command Assistant | *IN PROGRESS | Python, sherpa-onnx*

- Developing a Python desktop voice assistant with a planned custom "Hey Artemis" activation phrase.
- Experimenting with sherpa-onnx offline keyword spotting and a custom keyword vocabulary; wake-word and response integration remain in development.

Retail Sales Analytics Dashboard | *SQL, Power BI, DAX*

- Developed a Power BI reporting dashboard for revenue, profit, order volume and profit margin, with category and sales-trend views.
- Used SQL-based analysis and DAX measures to explore performance patterns and time-based reporting.

Certifications

Supervised Machine Learning: Regression and Classification(Coursera-Stanford).
Python for Data Science, AI & Development(IBM-Coursera).
Databases and SQL for Data Science with Python (IBM-Coursera).
